

A close-up photograph of the black, textured strap and buckle of a smartwatch. The strap features a series of horizontal ridges and a small red accent on the side. The buckle is black and has a silver-colored metal clasp. The watch face is partially visible on the left, showing a black screen with white text and numbers.

Figure 1

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was plotted against the number of trials for each condition. The number of correct responses increased with the number of trials for all conditions. The number of correct responses was highest for the condition with the highest number of trials (10 trials) and lowest for the condition with the lowest number of trials (2 trials).

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was significantly higher for the 10 trials condition than for the 5 trials condition. Error bars represent the standard error of the mean.
